The same choices win on the swing-averaged label; only soft labels stop mattering (3 seeds each)
(a) Mean distance
(b) Within ±1
v2 final recipe
v1's inputs (energy frames + θ(0))
θ(0) only
sees 33 sites, not the whole ring
sees 17 sites
hard labels (other loss terms kept)
camera on every 2nd pendulum, 10-3 rad
coarse camera (10-2 rad) from τ = 20
energies at τ = 30, one frame
